Education

Trent University | Bachelor of Computer Science · *Ontario, Canada* Sep 2023 – Aug 2026
Relevant coursework: Applied AI & Machine Learning, LLM & Natural Language Processing, Data Mining, Data Structures & Algorithms, Software Design & Modelling, Systems Programming, Database Management Systems

Seneca College | Electronics Engineering Technician · *Ontario, Canada* Jan 2018 – Aug 2020
Relevant coursework: Programming Using C, Micro-controller Concepts, Computer Networks

Technical Skills

Languages: Python, JavaScript, C, C++, Java, SQL
Web Development: Django, React.js, Node.js, HTML5 & CSS3, REST/JSON APIs, WebSockets
Databases: PostgreSQL, MySQL, SQLite
Tools / DevOps: Git & GitHub, GitHub Actions, Docker, Linux / Bash
Certifications: Complete Python Mastery (Code with Mosh); Introduction to Generative AI (Google Cloud)

Projects

Pitwall: F1 Race Strategy Explorer | *Python, Django, PostgreSQL, JavaScript, Docker, GitHub Actions* Live demo

- Built a Django web app that compares two drivers' lap pace and tyre strategy across six 2025 Grands Prix, importing real timing data from the OpenF1 API with rate-limit-aware retries and validated, all-or-nothing imports.
- Implemented clean-lap filtering, median pace and tyre-stint detection with dependency-free SVG charts and a fastest-lap telemetry replay; covered by 14 automated tests in GitHub Actions CI and deployed as a live demo on GitHub Pages.

Motion Detector | *Raspberry Pi, Python, PIR sensor, SMTP, TRM240 LTE* Code

- Developed a Python-based event listener to process PIR sensor interrupts and integrated SMTP libraries for automated alert dispatching within 5 minutes of detection.
- Connected the Raspberry Pi to the internet using a TRM240 LTE modem to establish an independent network connection, ensuring continuous real-time environment monitoring.

Temperature-Controlled Home Automation | *Arduino, React.js, Node.js, WebSockets* Code

- Architected an Arduino-based system with a React.js/Node.js mobile interface, implementing a real-time data pipeline to synchronize temperature states across multiple concurrent users via WebSocket.
- Engineered automated control logic to process ambient data from a digital thermometer, bypassing manual inputs to maintain precise climate conditions.

Experience

Compugen | Deployment Tech · *GTA, Canada* Jan 2024 – Present

- Automated the configuration of 45 to 50 client laptops using deployment scripts and executed the on-site setup for Hamilton Health Sciences, resulting in seamless hardware transitions across departments.
- Installed 12 complete Point of Sale (POS) and payment systems daily for The Beer Store, integrating all necessary hardware to ensure retail locations were immediately operational.
- Resolved 5 critical hardware/software issues for Canadian Bank Note by diagnosing network protocol and registry conflicts, ensuring zero downtime for secure printing operations.

Telus | Smart-Home Security Technician · *GTA, Canada* Jan 2023 – May 2023

- Diagnosed and resolved complex hardware and software failures for smart-home security systems within 30–45 minute windows, using systematic troubleshooting to isolate network issues.
- Debugged device connectivity issues across 1 to 3 residential properties daily, ensuring reliable system integration and sustained operational readiness for end-users.
